This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

PROPOSED AMENDMENTS
FOR DISCUSSION PURPOSES ONLY

Application No. 10/748,477

1. A computer-implemented method in a computer system for preventing one or more immunizations from being administered to a person too early, the method comprising:

receiving from a clinician, utilizing a first computer process, an [[the]] immunization[[s]] to be administered to a person, wherein the immunization is input by the clinician during a clinical visit with the patient;

in response to receiving the immunization to be administered during the clinical visit, determining, utilizing a second computer process, whether it is too soon to administer the immunization; and

based on a determination that it is too soon to administer the immunization, displaying a warning if so, outputting information that the immunization is being administered too soon,

wherein the first and second computer processes are executed utilizing one or more computing devices.

26. A computer system including one or more computer-readable storage media having computer-executable modules stored thereon in a computerized environment for preventing one or more immunizations from being administered to a person too early, the computer-executable modules system comprising:

a receiving module for receiving from a clinician the immunization[[s]] to be administered to a person during a clinical visit, wherein the immunization is received from the clinician during the clinical visit;

a determining module for determining whether it is too soon to administer the immunization in response to receiving the immunization to be administered from the clinician during the clinical visit; and

a displaying an outputting module for displaying a warning outputting information that the immunization is being administered too soon.

46. A computer-readable medium having computer-executable instructions for performing a method for preventing one or more immunizations from being administered to a person too early, the method comprising:

receiving from a clinician an [[the]] immunization[[s]] to be administered to a person; wherein the immunization is input by the clinician during a clinical visit with the patient;

in response to receiving the immunization to be administered to the person during the clinical visit, determining whether it is too soon to administer the immunization during the clinical visit; and

based on a determination that it is too soon to administer the immunization, displaying a warning if so, outputting information that the immunization is being administered too soon, wherein the warning is a first pop-up warning window;

based on a determination this it is not too soon to administer the immunization, determining whether the immunization will cause an adverse reaction to the person;

upon determining that the immunization will cause an adverse reaction, displaying a warning that the immunization will cause an adverse reaction via a second pop-up warning window; and

upon determining that the immunization will not cause an adverse reaction, displaying a message that the immunization may be administered during the clinical visit.
